# WORKWEAR BY BRAMS HAS TAKEN THE FIRST STEP TOWARDS TRANSPARENCY

This brochure features products made of organic cotton (OCS-certified), recycled polyester (GRS-certified) and elastane. In addition, these products have an EIM rating.

The EIM score is composed of 4 pillars:

- **Water consumption:** This shows the water consumption, or in other words, the litres of water used for each garment produced.
- **Energy:** It reflects the total sum of the energy required to operate machinery, tools, and heating elements used in the laundry process, shown in kWh used.
- **Chemicals:** Each chemical has its own EIM Chemical Impact Score (CIS) based on hazardousness and the Zero Discharge of Hazardous Chemicals (ZDHC) conformance. ZDHC is a renowned organisation that has defined a list of chemical limits that are safe to use during garment production. The score is based on the amount of chemicals used and their CIS score.
- **Worker strain:** This score shows the impact of the laundry processes on workers' health. Operations are scored based on the ergonomic and health risks of the washing steps.

The Environmental Impact Measurement system results in a total score that is either **Low impact (0-33)**, **Medium impact (34-66)** or **High impact (67-100)**.

EIM is a clear and transparent tool that provides reliable measures to help identify where the impact is greatest and determine efficient action plans to improve garment finishing processes. Because we believe that the first step to minimize this impact is to properly assess the best points to improve... Too often aspects are misunderstood, and through EIM it is easier to visualize viable goals that will really make a difference. EIM provides valuable information to determine if your garment finishing efforts lead in the mid and long term to the desired objective: **THE REDUCTION OF THE IMPACT ON OUR ENVIROMENT.**
